

50th Percentile: 7 days
75th Percentile: 11 days
85th Percentile: 11 days
95th Percentile: 12 days
98th Percentile: 12 days

The chart displays the flow and forecast for arrivals and departures. The y-axis represents the count (0 to 18), and the x-axis represents the date (2026-03-04 to 2026-05-15). The legend indicates the following series:

- Arrivals:** Blue bars and area.
- Departures:** Green bars and area.
- Confidence Intervals (Forecast Period):**
 - 50% Confidence: Teal area.
 - 75% Confidence: Red area.
 - 85% Confidence: Purple area.
 - 95% Confidence: Pink area.
 - 98% Confidence: Dark red area.

The chart shows a steady increase in both arrivals and departures over time, with a significant jump in arrivals around April 1st. The forecast period begins around April 15th, showing a projected increase in arrivals and a corresponding increase in departures, with confidence intervals widening as the forecast extends further into the future.
